Hello,

My name is Sumedha Kolli, and I am looking for an opportunity where I can apply the skills and knowledge that I have acquired through classes, clubs, and experiences.

As a freshman at USC on the pre-engineering track to major in Computer Science/Business, I find myself immersed in courses that strengthen my knowledge of the intersection of critical thinking in both financial and computing concepts. With an added minor in Applied Analytics, I am able to develop my skills in logic and analysis through courses in Web Development, C++, Python, Data Analytics, and Machine Learning. On campus, I have come to be involved in both professional organizations, such as Smart Woman Securities and Scope, and community-based organizations, like Scholars Leading Scholars, that combine to create both technical and societal awareness. Through Smart Woman Securities, I have been able to develop skills in analyzing financial statements, creating stock pitches, and understanding many financial concepts. With Scope, I am able to participate in internal hackathons and create personal projects in various softwares and technologies, including Node.js, React Native, and Electron. In terms of experience, I was fortunate enough to intern at a start-up known as The Women's Network, focused on building an inclusive community of ambitious college students, and through my time there, I was able to become well-versed in many skills, like data analytics from needing to collect and analyze the information of over 5,000 members, problem-solving from using data insights to create strategies for the organization's growth and efficiency, and flexibility and teamwork in communicating with my team. I was also involved in the Rewrite Your Summer program as a part of the Data Visualization Pipeline Team. As a group, we were able to build a web application for the Rewriting the Code board to access the profiles and visualizations of 6,000+ members. This experience allowed me to build on my developing, product design, product management, and collaborative abilities. Eventually, I hope to use my blended interests in finance, technology, innovation, and environmentalism to create sustainable solutions to current widespread business operations. I will also attach a resume that further explains my experiences and skills. Thank you for your time, and I look forward to hearing back from you!

Sincerely,

Sumedha Kolli
